

In my application, I could not set cookies and could not redirect user to home page after logging in.

Code for setting cookies:

```
res.writeHead(200, {'Set-Cookie': 'athome-session=331', 'Content-Type': 'text/plain'})
```

Code for redirecting:

```
res.writeHead(302, {'Location': 'https://localhost:8000'})
```

Setting both in single ResponseHeader:

```
res.writeHead(302, {'Set-Cookie': 'athome-session=331',  
'Content-Type': 'text/plain', 'Location': 'https://localhost:8000'})
```

But unfortunately, none of this worked. That is why I could not perform the attack. But I have obtained a theoretical understanding of the attack from the provided materials.
